## Environmental Flooring Solutions

### FLOOR PREPARATION

West Environmental Flooring Solutions is leading the way in the UK by using diamond grinding for floor preparation.

#### MORE CONVENIENT PREPARATION

When compared to traditional methods of preparation including blasting and scarifying this new technology results in significantly less noise and vibration and dramatically less dust. Consequently a floor can be prepared and polished in phases alongside other teams executing other tasks.

#### ENVIRONMENTALLY FRIENDLY

Because the finish provided by diamond grinding is so smooth and uniform the amount of material required to cover the resulting floor space is significantly reduced in most cases. This has a very positive effect on the environmental impact of any implementation. In fact if polishing is a viable option then no other topping or coating is required at all.
